

nicoflex
medi forte sport cream

for

- sprain
- muscle strain

EN Nicoflex medi forte sport cream is a preparation for external use in case of sprain, and muscle strain thanks to its capsaicin and ethyl-nicotine active substances. During its effect the blood circulation of the covered skin area increases, this effect makes the muscles more flexible. Application is recommended before trainings and also prior to serious physical strain or muscle work. Moisturizing components provide elasticity.

Application: Apply a thin layer of cream on clean, dry skin, then massage it in until it is absorbed. Do not use the cream on the whole body!

Warning: Avoid contact with eye, mouth, and other mucosa area. Rinse the eye, mouth and/or affected mucous membranes with plenty of water in case of accidental contact. Contact your doctor or pharmacist if eye irritation does not get better. Do not use the preparation in case of hypersensitivity to the ingredients, or in case of inflammatory processes, open injury, eczema, damaged skin, excessive redness, burning sensation and in case of other skin-diseases. Use of this product is not recommended during pregnancy and lactation. Not recommended for use on sensitive skin. After embrocation skin redness, warming and at the same time mild hip feeling starts up which is to be gradually phased out in an hour. Stop using the cream if the excessive redness of the skin. Thorough hand washing with soap and warm water is necessary after applying the cream.
